How To Use a NC Series Coax Hand Bender

The NC Series coax benders are designed to make precision bends in a piece of coax cable. Follow the figures below to make a bend in a piece of coax cable.

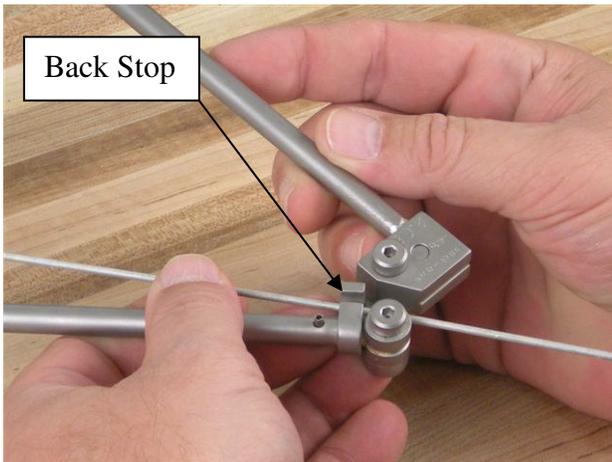

Figure 1: Install coax in bend die groove and then rotate up the back stop as shown with your left ring finger or middle finger as shown.

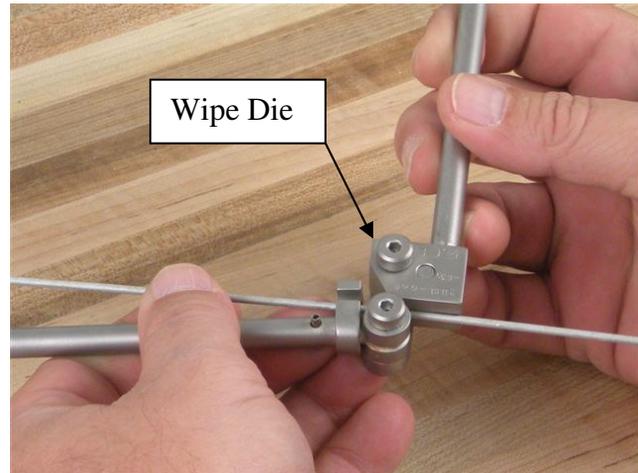

Figure 2: While holding up the back stop with your left hand, close the wipe die with your right hand until it sits tangent to the coax.

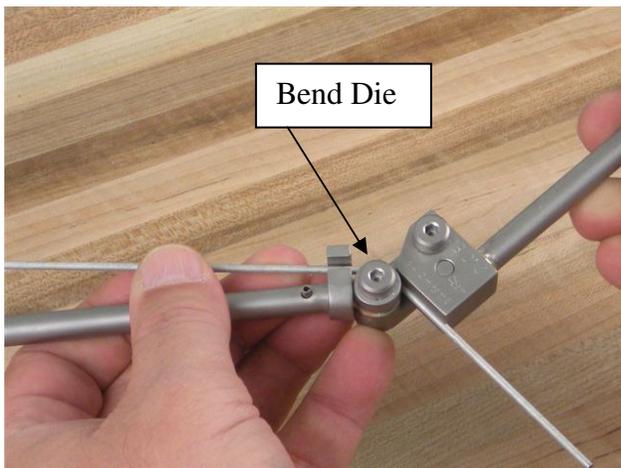

Figure 3: Rotate the wipe die handle CW about the bend die until the desired bend angle is achieved.
